

Setting up your ADSL Connection

Physical installation

Connect the ADSL modem to the phone jack, then the computer network card to the ADSL modem with the network cable. The ADSL Filters should go between the phone jack and the phone if you hear static on any of your phones. The ADSL Status light on the modem should appear green within a few minutes of plugging in the modem.

1. Click on Start/Settings/Control Panel
2. Click on Network
3. Double click on TCP/IP > Your network card
4. On the IP tab select specify an IP address.
In the IP Address section put _____
In the subnet mask part put 255.255.255.0
5. On the Gateway tab add the gateway _____
6. On the DNS tab select "enable"
and the DNS #'s 204.239.167.3 & 204.239.167.13.
In the host field you can type the name of your computer or username

Click okay on the network window and you may be asked to reboot your computer

After rebooting go to Start/Settings/Control Panel or right click the Explorer icon and pick Properties.

1. Click on Internet Options
2. Click on the Connection Tab
3. Set it to "Never dial a connection"

Click okay and open your web browser, you should now see web pages.
